Over the last 200 years the world has gone through four **technology-driven** revolutions

Digital disrupts Efficiency & Sustainability

3x IoT

IoT connections 2018-2025 (*GSMA)

>5x Big Data

generated data from 33 ZBs today to 175 ZBs by 2025 (*IDC, 2018)

6x AI

worldwide spending on cognitive and AI systems btw 2017 & 2022 (International data corporation)

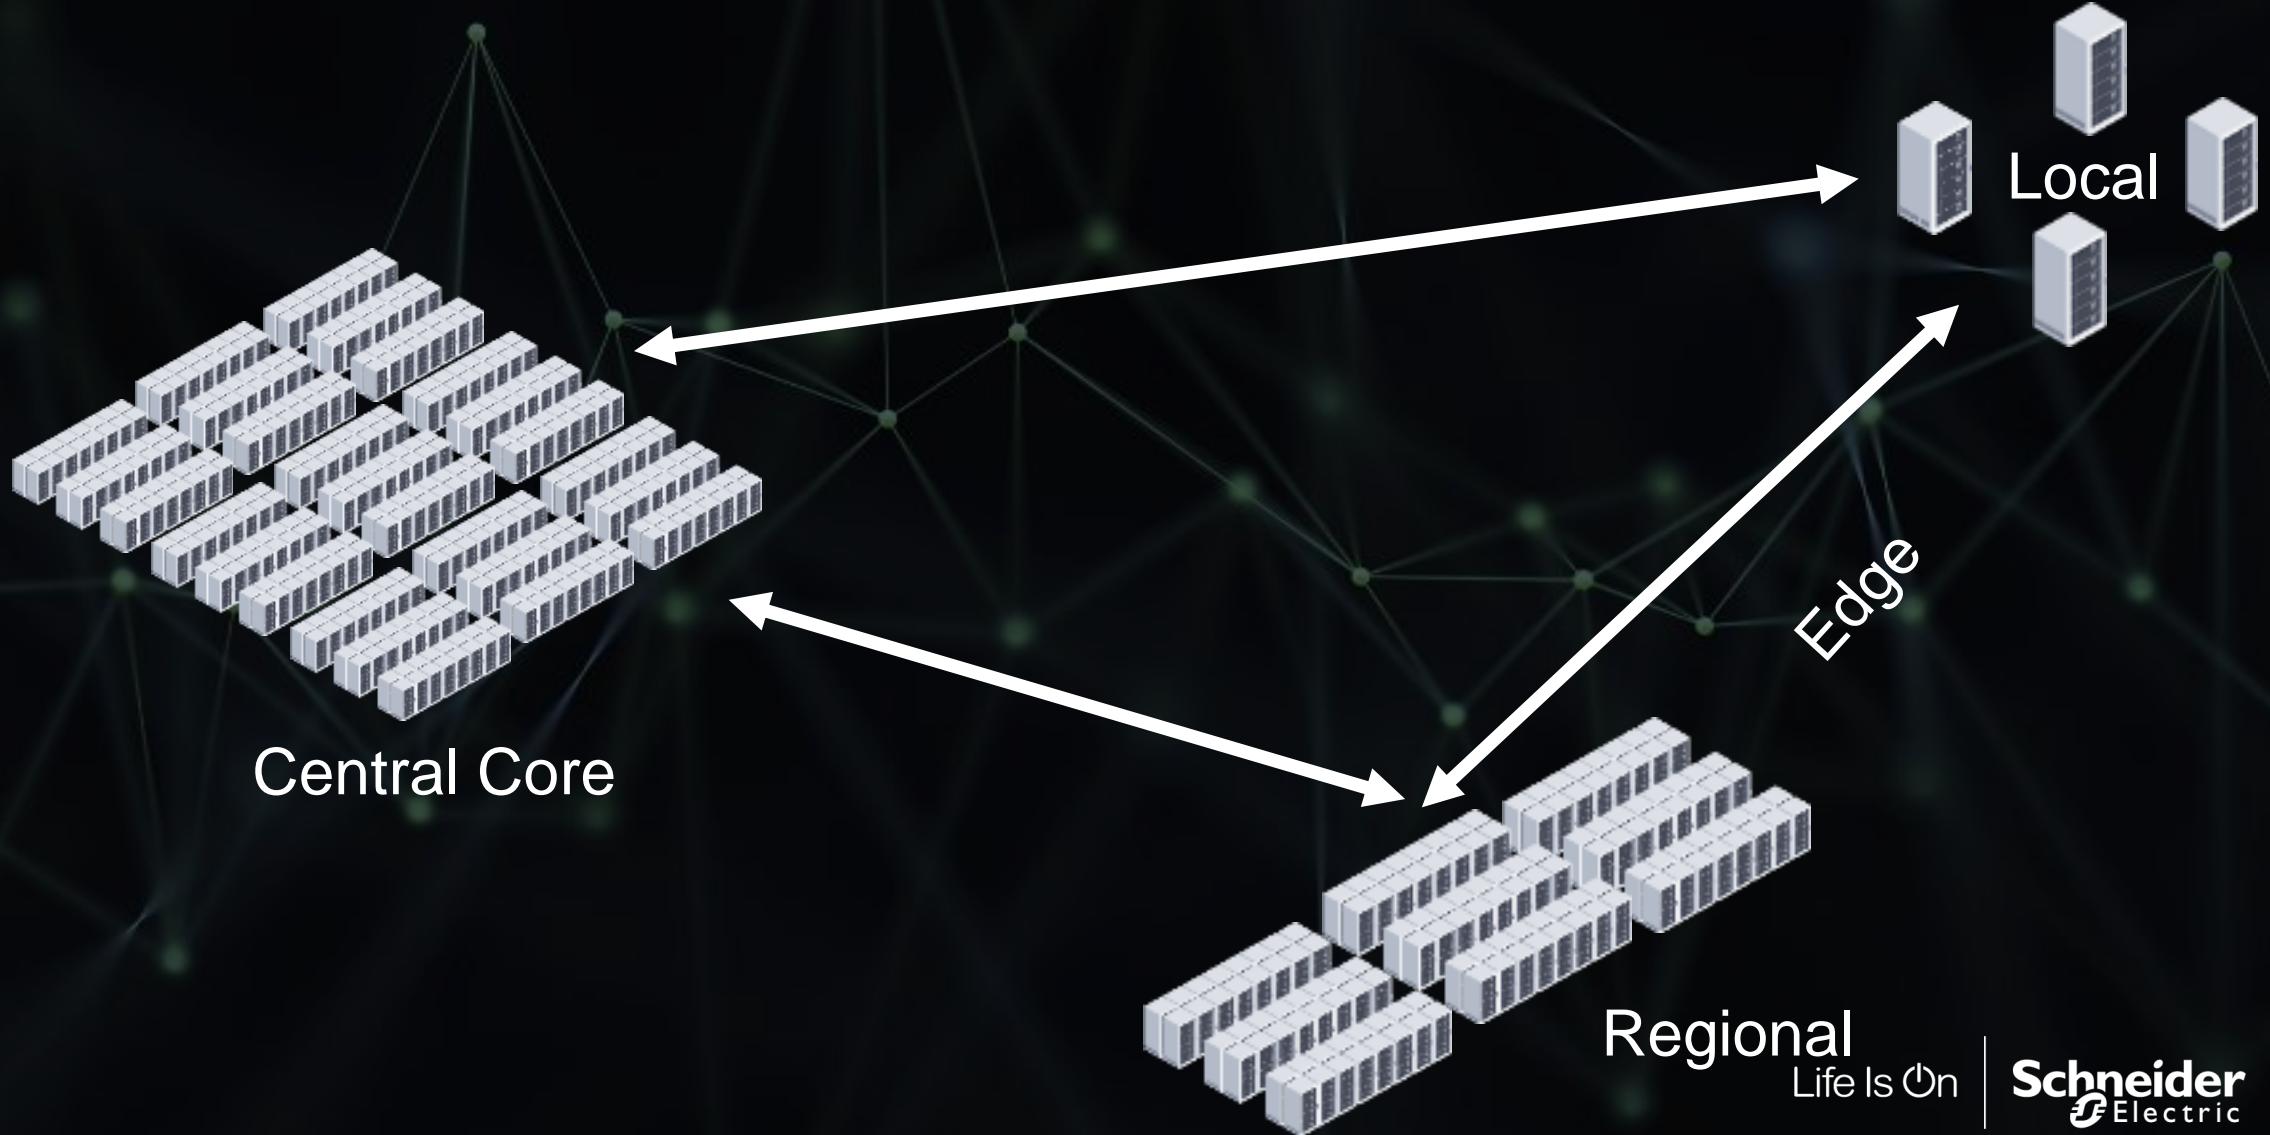

Digital builds a smart future

Home Building Industry Infrastructure Cities

Data Centers are *the Heart of the Digital World*

To support this **digital transformation**, the data center architecture is becoming increasingly **hybrid**

Data Centers need to evolve to meet the needs of this digital transformation

500%

Growth in global data generated by 2025²

50%

Increase in electrical footprint of all data centers by 2025¹

75%

of data will be processed at Edge by 2025⁴

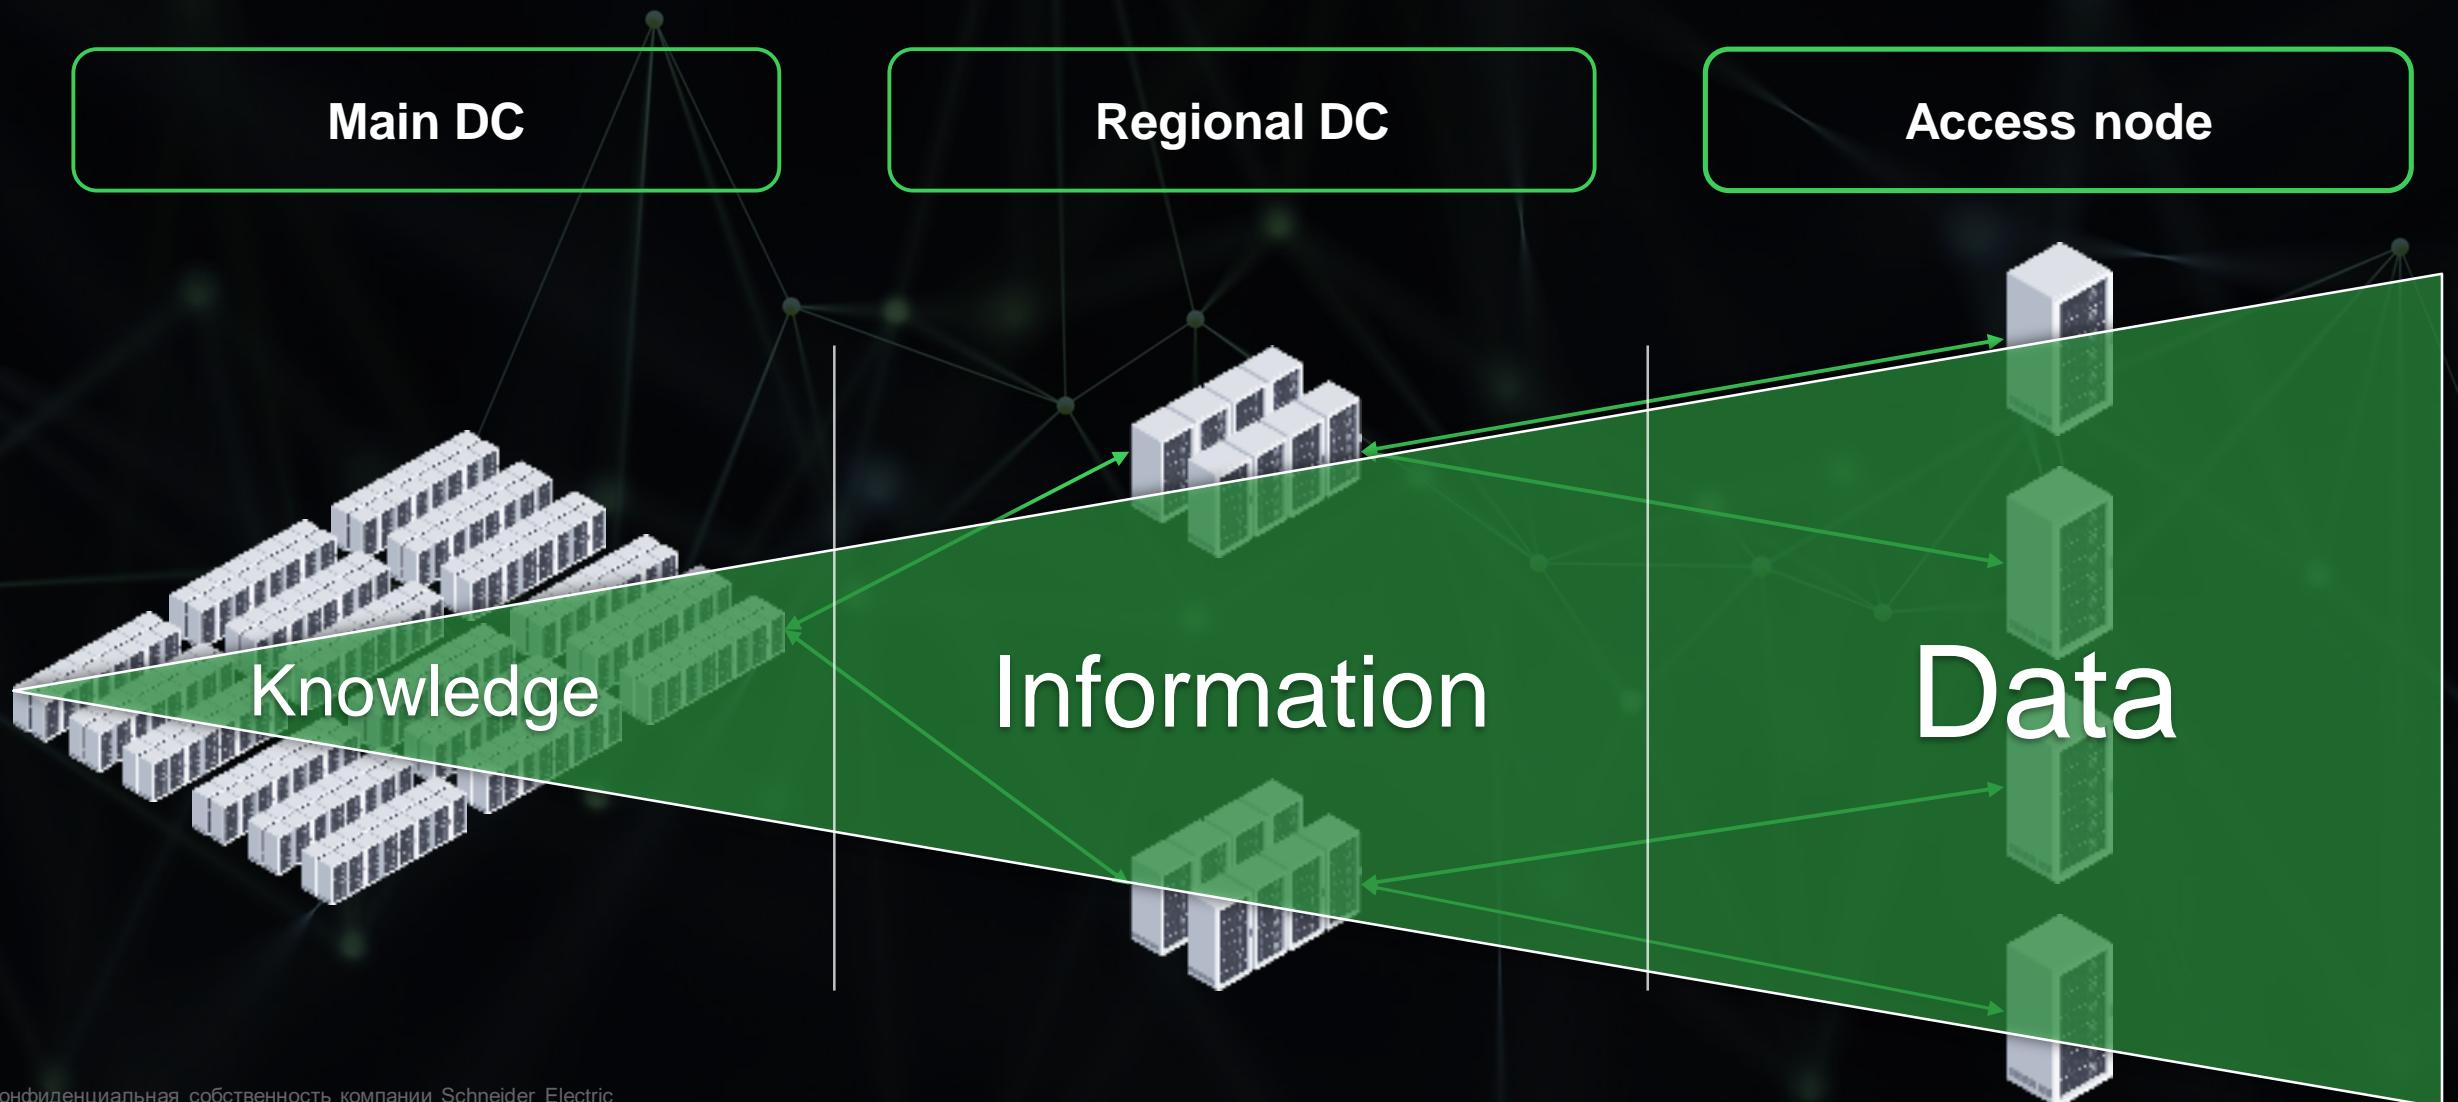

24%

of executive's report that over 50% or more of their data centers will be self-configuring by 2025³

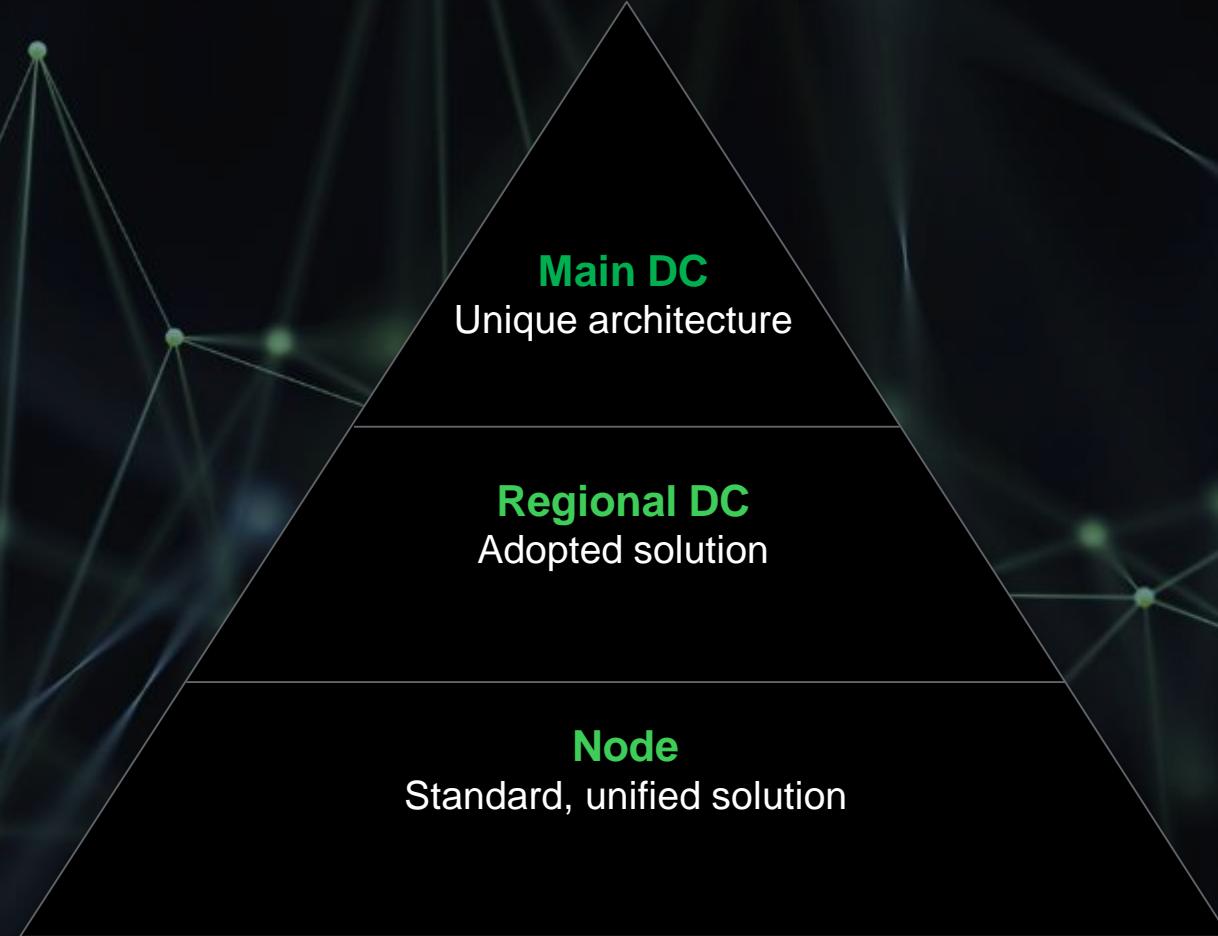

Digital world Datacenters infrastructure:

- **IT Decentralization**
 - Hybrid
 - IT service is more important than node
- **Unified strategy for the development of the computing environment**
 - Centralization of decision making
 - Implementation optimization
- **Monitoring and control**
 - Remote control
 - Maintenance service redundancy

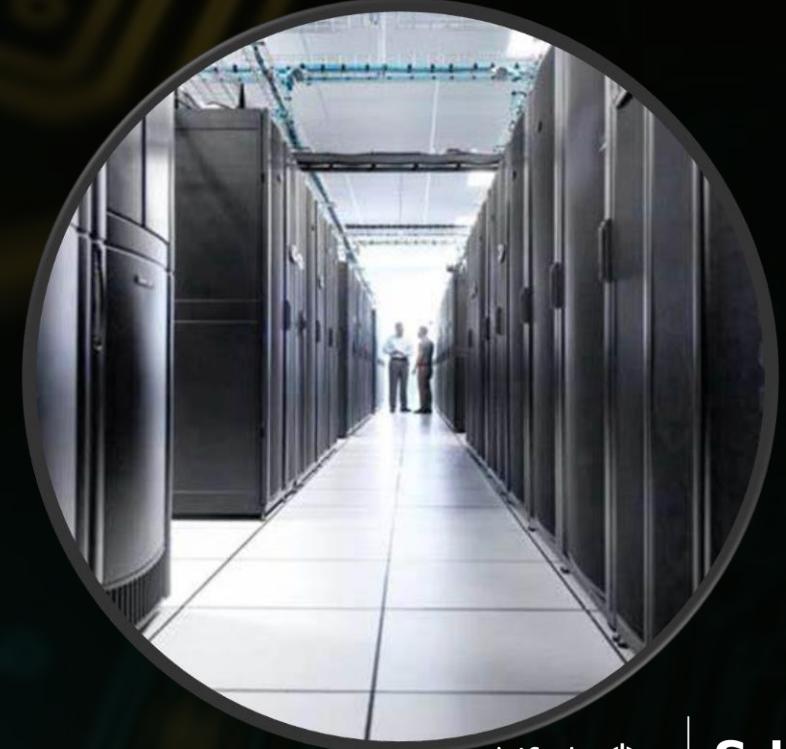

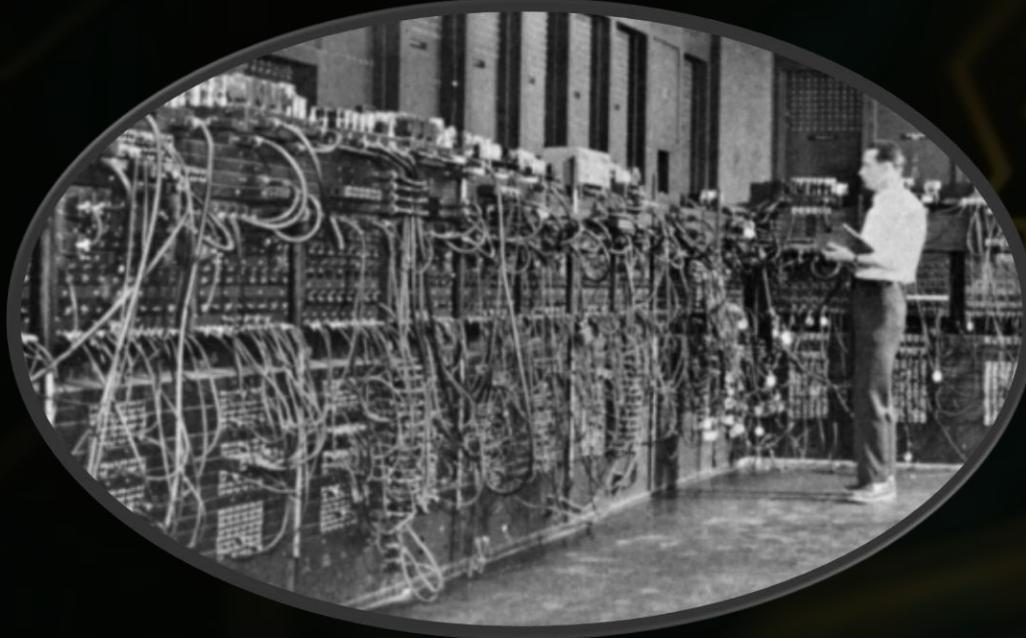

Hybrid architecture for Computing

Unified strategy for the development of the computing environment

We have evolved the original transistor-based Data Centers of the past that were very inefficient, unmetered, static, and unreliable

A dark, atmospheric photograph of a man in a server room. He is standing in a aisle, looking at a tablet or a piece of paper. The room is filled with server racks, and the lighting is low, with some light coming from the screens of the equipment.

**Data Centers of
the future**

Is our **VISION**
where:

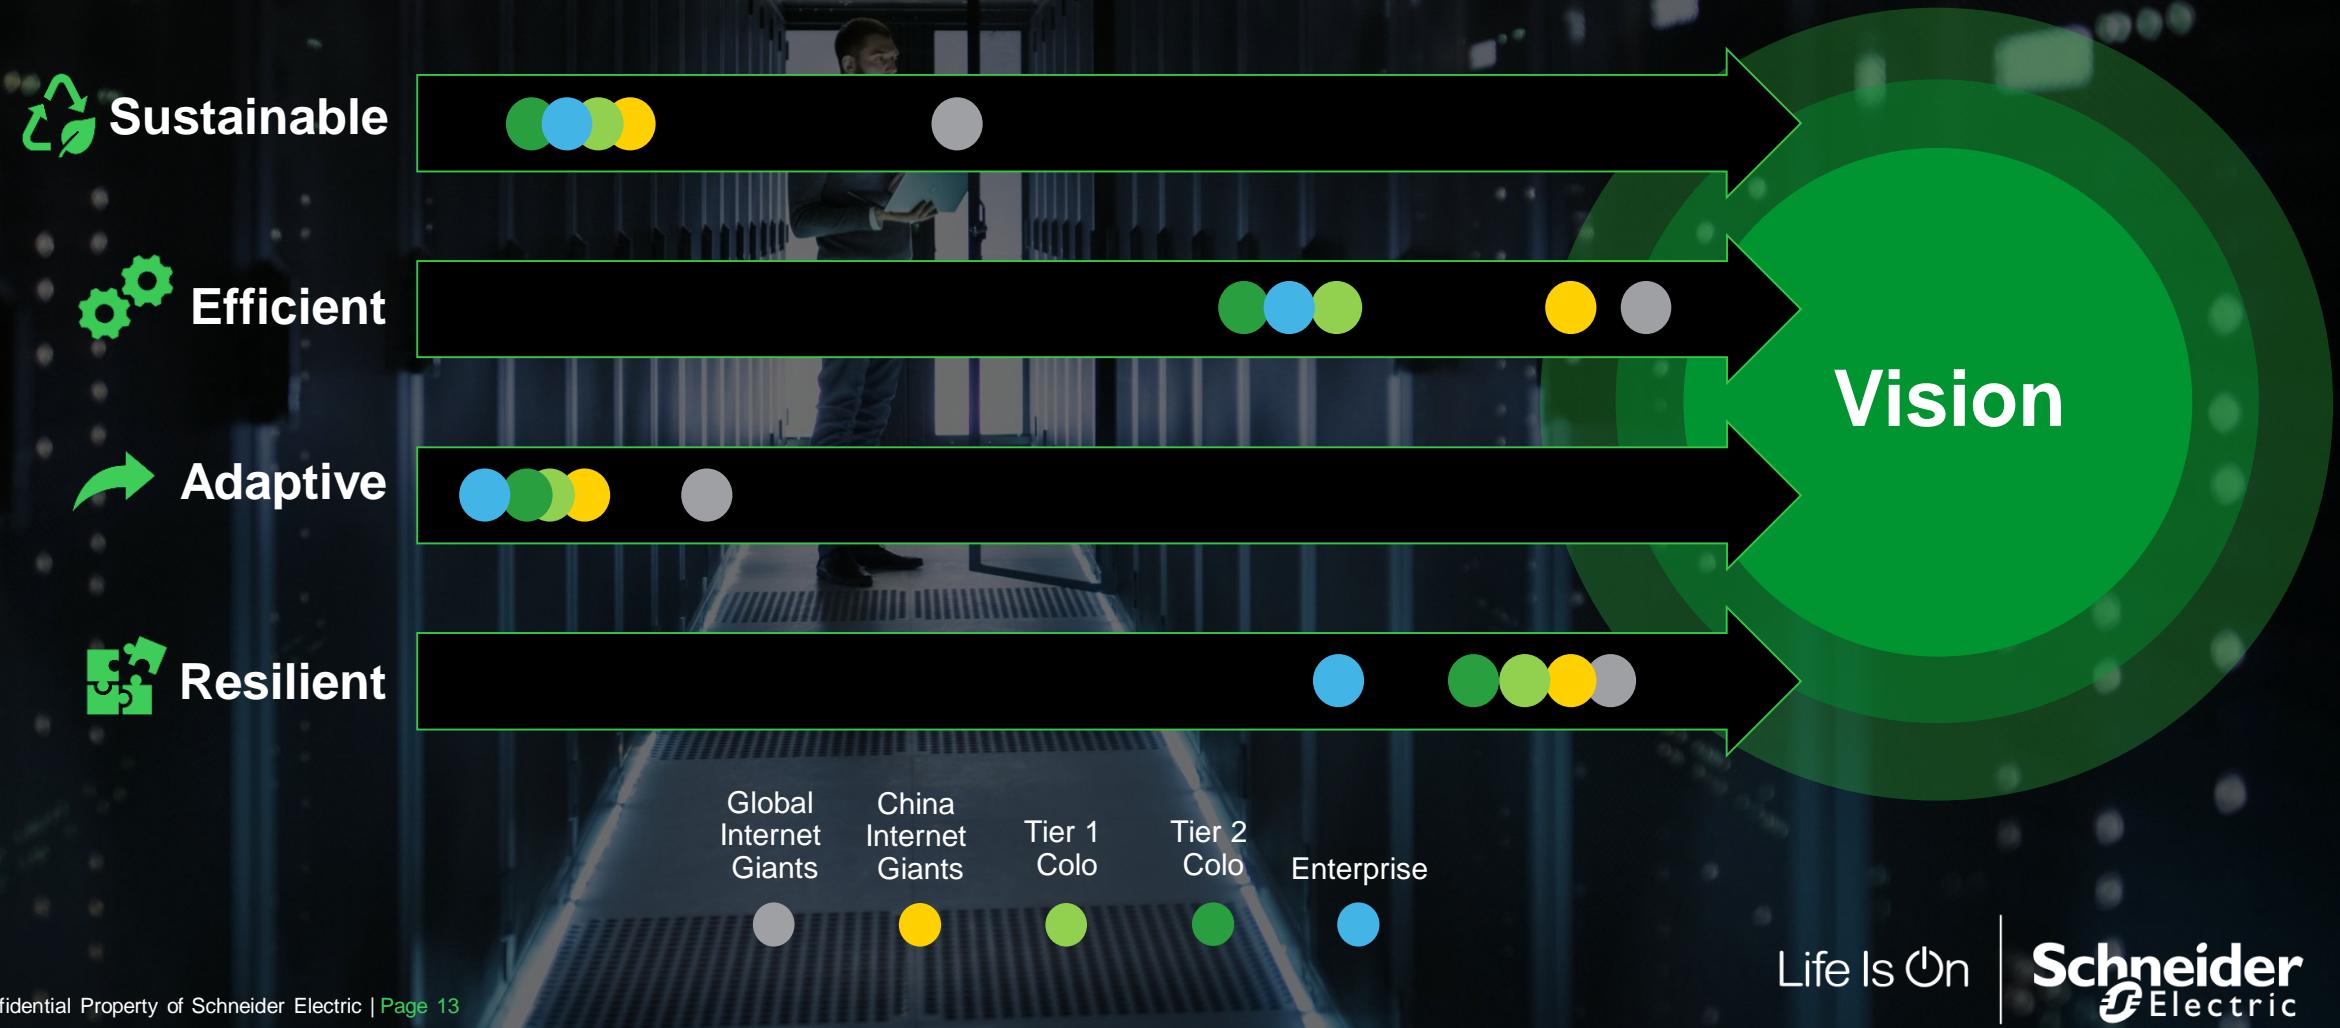

Sustainability 

Efficiency 

Adaptability 

Resiliency 

Data center owner/operators are at different levels of maturity across the four vectors

Sustainable

*Meet the business needs responsibly,
without compromising the future*

- Carbon strategy consulting
- Renewable energy sourcing
- Resource-efficient designs
- Resource management
- Circular materials inc. batteries
- Carbon efficient supply chain consulting

Efficient

*Optimize cost, speed, space and capital
to increase return on investment*

- **High Density IT**
- **Maximum Structural Efficiency**
- **Individual capital and cash flow**
- **Optimized processes**
- **Digital Services**

Adaptive

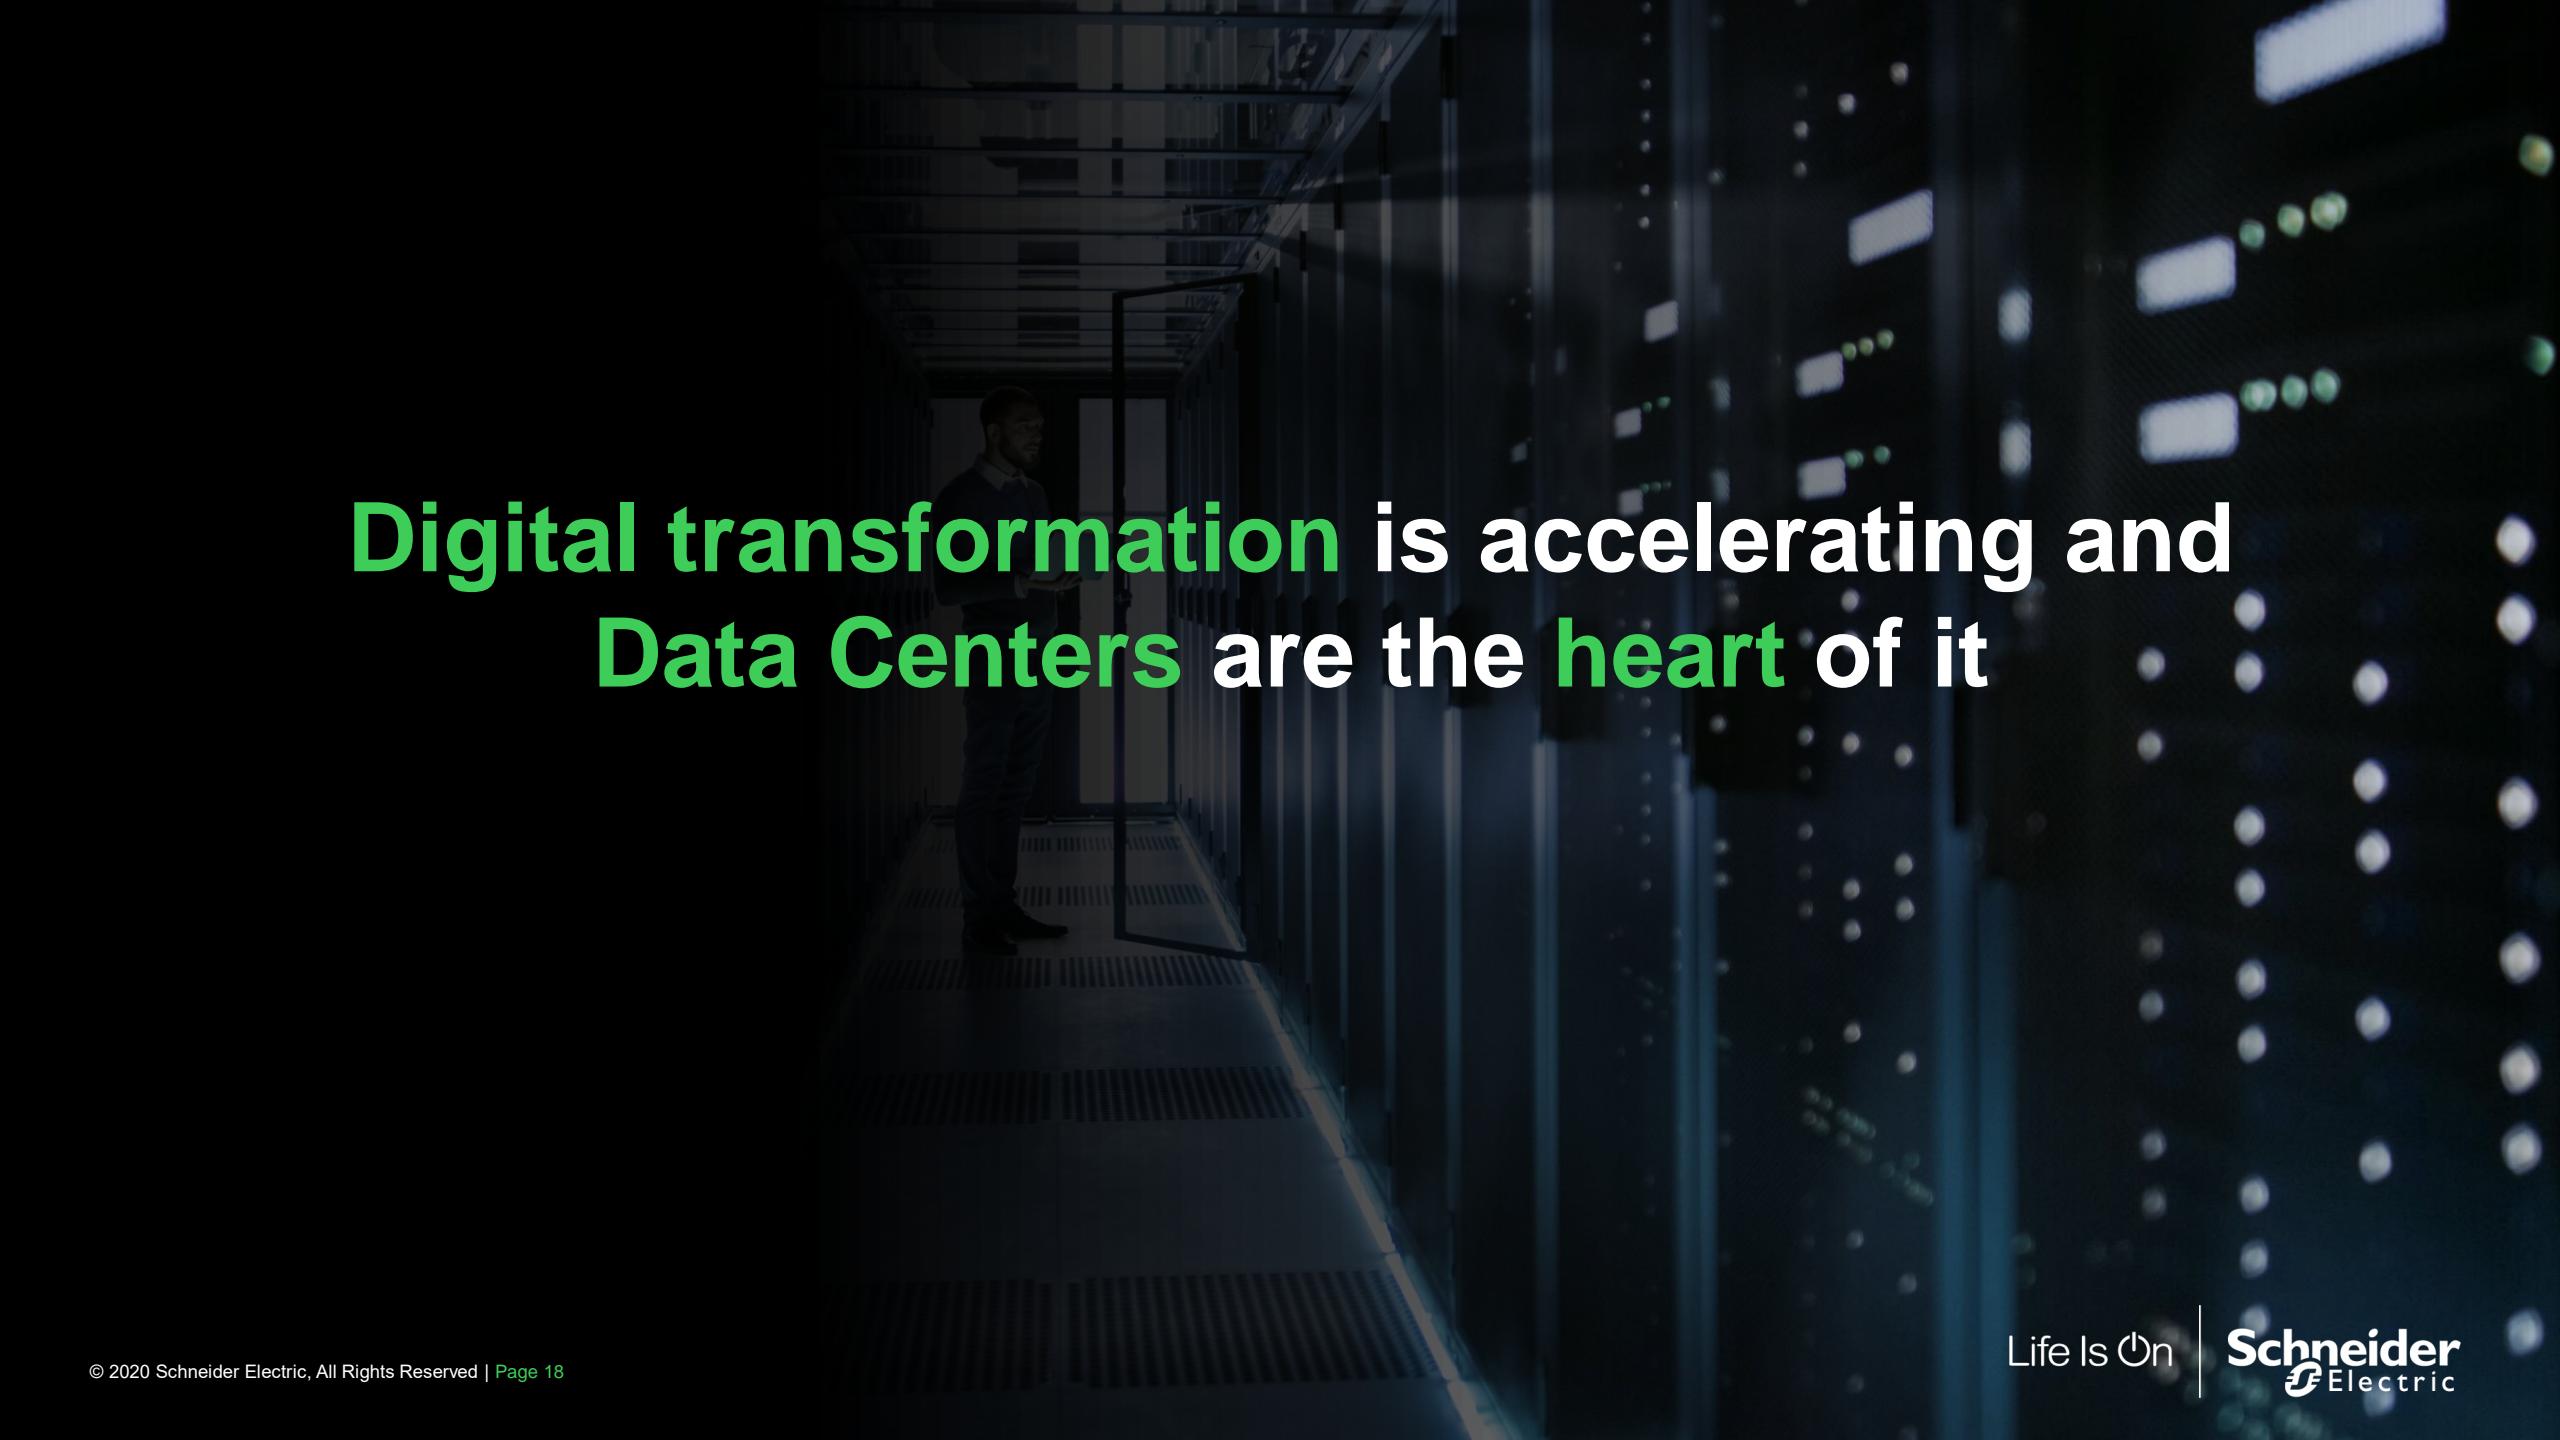

Designed to adapt to new technologies

- **Flexibility in design, deploy, and service**
- **Compatible with next generation IT**
- **Software defined - workload and application portability**
- **Active energy management**

Resilient

Reduced vulnerability to unplanned downtime

- Reliability through redundant power and cooling
- Remote control
- Enhanced Cyber Security
- Comprehensive predictive analytics
- Relationship between data analysis and service

A dark, atmospheric photograph of a server room. In the center-left, a man in a dark shirt and trousers stands looking down at a small device on a metal cart. Behind him are rows of server racks, their front panels glowing with numerous small blue and green lights. The overall mood is mysterious and high-tech.

**Digital transformation is accelerating and
Data Centers are the heart of it**

A dark, atmospheric photograph of a server room. In the center, a man in a dark shirt and trousers stands looking down at a floor with glowing blue and green nodes. To his right, a server rack is visible with many small, glowing blue and green dots representing data. The background is dark and out of focus.

Schneider Electric has the **Expertise,
Connected Solutions and **Ambition** to be your
trusted partner along the journey**

A dark, atmospheric photograph of a data center. In the center-left, a man in a dark shirt and trousers stands in a server aisle, looking down at something in his hands. The aisle is flanked by tall server racks. The background is dark and out of focus, with some glowing blue and green lights from the server panels.

We will help you establish a **vision** and
build your **data center of the future**
